Office Action Summary

Art Unit 1762

1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 1-17, 19 and 21, drawn to a method of fabricating a corrosion and erosion resistant component, classified in Class 156 or 204 or 205 or 219 or 427, subclass 60+, or 192.3, or 80+, or (121.46 or 121.64), or (446+, 554+, 248.1+ or 421), respectively.

II. Claims 18 and 20, drawn to ^{product} [6], classified in Class ⁴²¹ [7], subclass 411.1+.

2. Claims 1-4 and 9-17 are generic to a plurality of disclosed patentably distinct species comprising method species of (a) spraying; (b) electrolysis or chemical precipitations; (c) chemical vapor deposition; (d) adhesive bonding; (e) physical vapor deposition (note PVD is not necessarily a chemical process) or (f) welding with subspecies of (1) laser, (2) plasma. Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

3. The inventions are distinct, each from the other because of the following reasons:

Art Unit 1762

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product which is just layered on a core can be made by other techniques to produce the same structure, such as by use of different annealing techniques, and/or by supplying the second material in a form other than powder supplied in a capsule, as via fluidized bed or diffusion techniques.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, or vice versa, restriction for examination purposes as indicated is proper.

Art Unit 1762

5. A telephone call was made to William Geary on June 25, 2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

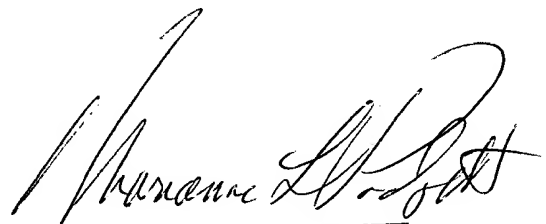

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Any inquiry concerning this communication should be directed to M. L. Padgett from Monday through Friday from about 8 A.M. to 4:30 P.M. at telephone number (703) 308-2336 and FAX #703 872-9310 (official), 872-9311 (official after final) and 305-6078 (unofficial).
